

Somalia Rainfall Forecast

Issued: 04 May 2018

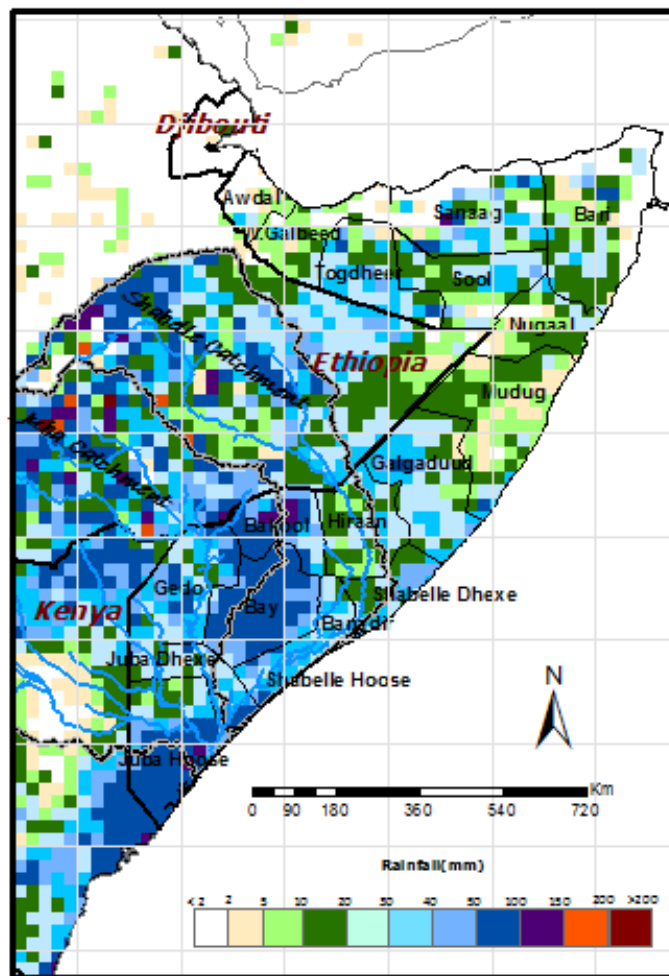

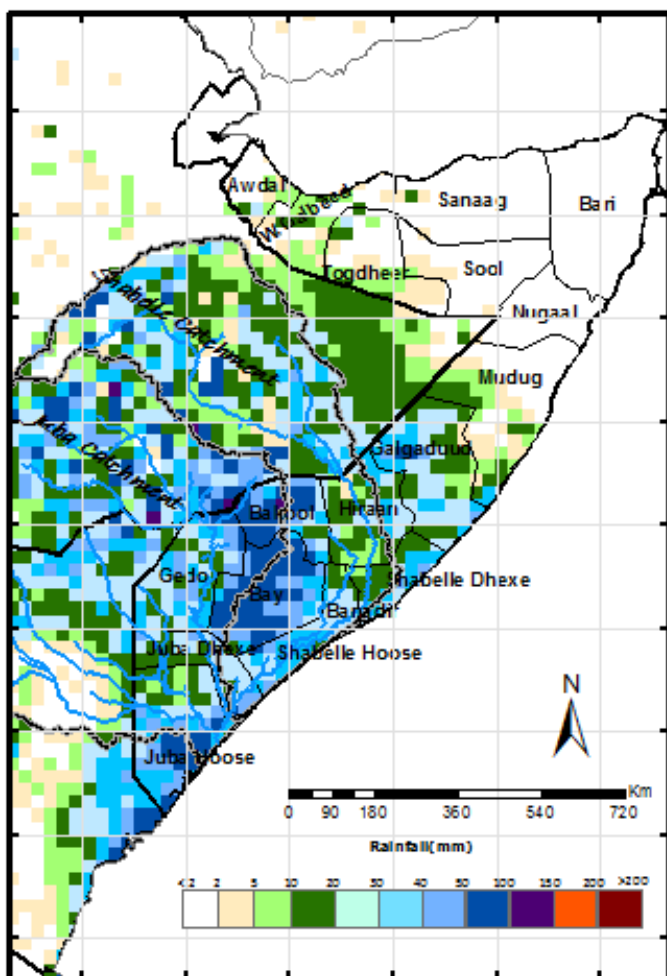

Enhanced rains are foreseen in the coming week in many parts of the country with Bay and Bakool regions in the south expected to record the highest amounts of rainfall. The Ethiopian highlands will also continue to receive good rains during the period in forecast.

The foreseen moderate to heavy rains are likely to exacerbate ground conditions, and trigger additional floods. Built up and low lying areas of Bay and Bakool will experience flash floods while river flooding along the Juba and Shabelle Rivers will continue.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found in this link: <http://systems.fao.org/frims/>

Map 1: 3 days rainfall forecast (04 - 06 May 2018)

Map 2: 7-day rainfall forecast (04 - 10 May 2018)
